# 1 Introduction

## **SUSI – A Bridge to Simplify & Enhance H/W & Application Implementation Efficiency**

When developers want to write an application that involves hardware access, they have to study the specifications to write the drivers. This is a time-consuming job and requires lots of expertise.

Advantech has done all the hard work for our customers with the release of a suite of Software APIs (Application Programming Interfaces), called **Secured & Unified Smart Interface** (SUSI).

SUSI provides not only the underlying drivers required but also a rich set of user-friendly, intelligent and integrated interfaces, which speeds development, enhances security and offers add-on value for Advantech platforms. SUSI plays the role of catalyst between developer and solution, and makes Advantech embedded platforms easier and simpler to adopt and operate with customer applications.

## 1.1 Benefits

### ✓ **Faster Time to Market**

SUSI's unified API helps developers write applications to control the hardware without knowing the hardware specs of the chipsets and driver architecture.

### ✓ **Reduced Project Effort**

When customers have their own devices connected to the onboard bus, they can either: study the data sheet and write the driver & API from scratch, or they can use SUSI to start the integration with a 50% head start. Developers can reference the sample program on the CD to see and learn more about the software development environment.

### ✓ **Enhances Hardware Platform Reliability**

SUSI provides a trusted custom ready solution which combines chipset and library function support, controlling application development through SUSI enhances reliability and brings peace of mind.

### ✓ **Flexible Upgrade Possibilities**

SUSI supports an easy upgrade solution for customers. Customers just need to install the new version SUSI that supports the new functions.

### ✓ **Backward compatibility**

Support SUSI 3.0, iManager 2.0 and EAPI 1.0 interface. Customers don't need to change any APIs in their applications.

## 1.2 Environment Requirements

### 1.2.1 Operating Systems

Windows XP Embedded

Windows XP Pro or Home Edition 32-bit

Windows 7 (x86 / x64)

WES7 (x86 / x64)

Windows 8 Desktop (x86 / x64)

Windows CE 5 / 6 / 7

Linux (Project based, request from your local FAE)

Android (Project based, request from your local FAE)

QNX (Project based, request from your local FAE)

VxWorks (Project based, request from your local FAE)

## 2 SUSI Definition

Susi4.h file includes the API declaration, constants and flags that are required for programming.

### 2.1 Status Codes

All SUSI API functions immediately return a status code from a common list of possible errors. Any function may return any of the defined status codes. See the Appendix for more detailed information.

<code>#define SUSI_STATUS_NOT_INITIALIZED</code>	0xFFFFFFFF
--	------------

#### Description

The SUSI API library is not yet or unsuccessfully initialized. SusiLibInitialize needs to be called prior to the first access of any other SUSI API function.

#### Actions

Call SusiLibInitialize.

<code>#define SUSI_STATUS_INITIALIZED</code>	0xFFFFFFFF
--	------------

#### Description

Library is initialized.

#### Actions

none.

<code>#define SUSI_STATUS_ALLOC_ERROR</code>	0xFFFFFFFFD
--	-------------

#### Description

Memory Allocation Error.

#### Actions

Free memory and try again.

<code>#define SUSI_STATUS_DRIVER_TIMEOUT</code>	0xFFFFFFFFC
---	-------------

#### Description

Time out in driver. This is Normally caused by hardware/software semaphore timeout.

#### Actions

Retry.

<code>#define SUSI_STATUS_INVALID_PARAMETER</code>	0xFFFFFFFFF
--	-------------

#### Description

One or more of the SUSI API function call parameters are out of the defined range.

## **Actions**

Verify Function Parameters.

**#define SUSI\_STATUS\_INVALID\_BLOCK\_ALIGNMENT** 0xFFFFFEFE

## **Description**

The Block Alignment is incorrect.

## **Actions**

Use Inputs and Outputs to correctly select input and outputs.

**#define SUSI\_STATUS\_INVALID\_BLOCK\_LENGTH** 0xFFFFFEFD

## **Description**

This means that the Block length is too long.

## **Actions**

Use Alignment Capabilities information to correctly align write access.

**#define SUSI\_STATUS\_INVALID\_DIRECTION** 0xFFFFFEFC

## **Description**

The current Direction Argument attempts to set GPIOs to a unsupported directions. I.E. Setting GPI to Output.

## **Actions**

Use Inputs and Outputs to correctly select input and outputs.

**#define SUSI\_STATUS\_INVALID\_BITMASK** 0xFFFFFEFB

## **Description**

The Bitmask Selects bits/GPIOs which are not supported for the current ID.

## **Actions**

Use Inputs and Outputs to probe supported bits.

**#define SUSI\_STATUS\_RUNNING** 0xFFFFFEFA

## **Description**

Watchdog timer already started.

## **Actions**

Call SusiWDogStop, before retrying.

**#define SUSI\_STATUS\_UNSUPPORTED** 0xFFFFFCFF

## **Description**

This function or ID is not supported at the actual hardware environment.

## **Actions**

none.

```
#define SUSI_STATUS_NOT_FOUND 0xFFFFFBFF
```

**Description**

Selected device was not found

**Actions**

none.

```
#define SUSI_STATUS_TIMEOUT 0xFFFFFBFE
```

**Description**

Device has no response.

**Actions**

none.

```
#define SUSI_STATUS_BUSY_COLLISION 0xFFFFFBFD
```

**Description**

The selected device or ID is busy or a data collision was detected.

**Actions**

Retry.

```
#define SUSI_STATUS_READ_ERROR 0xFFFFFAFF
```

**Description**

An error was detected during a read operation.

**Actions**

Retry.

```
#define SUSI_STATUS_WRITE_ERROR 0xFFFFFAFE
```

**Description**

An error was detected during a write operation.

**Actions**

Retry.

```
#define SUSI_STATUS_MORE_DATA 0xFFFFF9FF
```

**Description**

The amount of available data exceeds the buffer size. Storage buffer overflow was prevented.

Read count was larger than the defined buffer length.

**Actions**

Either increase the buffer size or reduce the block length.

```
#define SUSI_STATUS_ERROR 0xFFFFF0FF
```

**Description**

Generic error message. No further error details are available.

### **Actions**

none.

`#define SUSI_STATUS_SUCCESS`

0

### **Description**

The operation was successful.

### **Actions**

none.

## 2.2 ID

<code>#define SUSI_ID_UNKNOWN</code>	0xFFFFFFFF
--------------------------------------	------------

### Description

Undefined/Unknown ID

<code>#define SUSI_ID_BOARD_MANUFACTURER_STR</code>	0
<code>#define SUSI_ID_BOARD_NAME_STR</code>	1
<code>#define SUSI_ID_BOARD_REVISION_STR</code>	2
<code>#define SUSI_ID_BOARD_SERIAL_STR</code>	3
<code>#define SUSI_ID_BOARD_BIOS_REVISION_STR</code>	4
<code>#define SUSI_ID_BOARD_HW_REVISION_STR</code>	5
<code>#define SUSI_ID_BOARD_PLATFORM_TYPE_STR</code>	6

### Description

Board information string ID, use in SusiBoardGetStringA.

<code>#define SUSI_ID_GET_SPEC_VERSION</code>	0x00000000
<code>#define SUSI_ID_BOARD_BOOT_COUNTER_VAL</code>	0x00000001
<code>#define SUSI_ID_BOARD_RUNNING_TIME_METER_VAL</code>	0x00000002
<code>#define SUSI_ID_BOARD_PNPID_VAL</code>	0x00000003
<code>#define SUSI_ID_BOARD_PLATFORM_REV_VAL</code>	0x00000004
<code>#define SUSI_ID_BOARD_DRIVER_VERSION_VAL</code>	0x00010000
<code>#define SUSI_ID_BOARD_LIB_VERSION_VAL</code>	0x00010001
<code>#define SUSI_ID_BOARD_FIRMWARE_VERSION_VAL</code>	0x00010002

### Description

Board information value ID, use in SusiBoardGetValue.

<code>#define SUSI_ID_HWM_TEMP_CPU</code>	0x00020000
<code>#define SUSI_ID_HWM_TEMP_CHIPSET</code>	0x00020001
<code>#define SUSI_ID_HWM_TEMP_SYSTEM</code>	0x00020002
<code>#define SUSI_ID_HWM_TEMP_CPU2</code>	0x00020003
<code>#define SUSI_ID_HWM_TEMP_OEM0</code>	0x00020004
<code>#define SUSI_ID_HWM_TEMP_OEM1</code>	0x00020005
<code>#define SUSI_ID_HWM_TEMP_OEM2</code>	0x00020006
<code>#define SUSI_ID_HWM_TEMP_OEM3</code>	0x00020007
<code>#define SUSI_ID_HWM_TEMP_OEM4</code>	0x00020008
<code>#define SUSI_ID_HWM_TEMP_OEM5</code>	0x00020009

### Description

Board temperature value ID, use in SusiBoardGetValue.

<code>#define SUSI_ID_HWM_VOLTAGE_VCORE</code>	0x00021000
<code>#define SUSI_ID_HWM_VOLTAGE_VCORE2</code>	0x00021001
<code>#define SUSI_ID_HWM_VOLTAGE_2V5</code>	0x00021002
<code>#define SUSI_ID_HWM_VOLTAGE_3V3</code>	0x00021003
<code>#define SUSI_ID_HWM_VOLTAGE_5V</code>	0x00021004
<code>#define SUSI_ID_HWM_VOLTAGE_12V</code>	0x00021005
<code>#define SUSI_ID_HWM_VOLTAGE_5VSB</code>	0x00021006
<code>#define SUSI_ID_HWM_VOLTAGE_3VSB</code>	0x00021007
<code>#define SUSI_ID_HWM_VOLTAGE_VBAT</code>	0x00021008
<code>#define SUSI_ID_HWM_VOLTAGE_5NV</code>	0x00021009
<code>#define SUSI_ID_HWM_VOLTAGE_12NV</code>	0x0002100A
<code>#define SUSI_ID_HWM_VOLTAGE_VTT</code>	0x0002100B
<code>#define SUSI_ID_HWM_VOLTAGE_24V</code>	0x0002100C
<code>#define SUSI_ID_HWM_VOLTAGE_OEM0</code>	0x00021010
<code>#define SUSI_ID_HWM_VOLTAGE_OEM1</code>	0x00021011
<code>#define SUSI_ID_HWM_VOLTAGE_OEM2</code>	0x00021012
<code>#define SUSI_ID_HWM_VOLTAGE_OEM3</code>	0x00021013

### Description

Board voltage value ID, use in SusiBoardGetValue.

<code>#define SUSI_ID_HWM_FAN_CPU</code>	0x00022000
<code>#define SUSI_ID_HWM_FAN_SYSTEM</code>	0x00022001
<code>#define SUSI_ID_HWM_FAN_CPU2</code>	0x00022002
<code>#define SUSI_ID_HWM_FAN_OEM0</code>	0x00022003
<code>#define SUSI_ID_HWM_FAN_OEM1</code>	0x00022004
<code>#define SUSI_ID_HWM_FAN_OEM2</code>	0x00022005
<code>#define SUSI_ID_HWM_FAN_OEM3</code>	0x00022006
<code>#define SUSI_ID_HWM_FAN_OEM4</code>	0x00022007
<code>#define SUSI_ID_HWM_FAN_OEM5</code>	0x00022008
<code>#define SUSI_ID_HWM_FAN_OEM6</code>	0x00022009

### Description

Board fan speed value ID, use in SusiBoardGetValue and Smart Fan Functions.

<code>#define SUSI_ID_HWM_CURRENT_OEM0</code>	0x00023000
<code>#define SUSI_ID_HWM_CURRENT_OEM1</code>	0x00023001
<code>#define SUSI_ID_HWM_CURRENT_OEM2</code>	0x00023002

### Description

Board current value ID, use in SusiBoardGetValue.

<code>#define SUSI_ID_SMBUS_SUPPORTED</code>	0x00030000
<code>#define SUSI_ID_I2C_SUPPORTED</code>	0x00030100

### Description

Board supported information value ID, use in SusiBoardGetValue.

<code>#define SUSI_ID_SMBUS_EXTERNAL</code>	0
<code>#define SUSI_ID_SMBUS_OEM0</code>	1
<code>#define SUSI_ID_SMBUS_OEM1</code>	2
<code>#define SUSI_ID_SMBUS_OEM2</code>	3
<code>#define SUSI_ID_SMBUS_OEM3</code>	4

### Description

SMBus device ID, use in SMBus Functions.

<code>#define SUSI_ID_I2C_EXTERNAL</code>	0
<code>#define SUSI_ID_I2C_OEM0</code>	1
<code>#define SUSI_ID_I2C_OEM1</code>	2
<code>#define SUSI_ID_I2C_OEM2</code>	3

### Description

I<sup>2</sup>C device ID, use in I<sup>2</sup>C Functions.

<code>#define SUSI_ID_GPIO(GPIO_NUM)</code>	(GPIO_NUM)
<code>#define SUSI_ID_GPIO_BANK(BANK_NUM)</code>	(0x00010000 + BANK_NUM)

### Description

GPIO device ID, use in GPIO Functions.

<code>#define SUSI_ID_BACKLIGHT_1</code>	0
<code>#define SUSI_ID_BACKLIGHT_2</code>	1
<code>#define SUSI_ID_BACKLIGHT_3</code>	2

### Description

Backlight device ID, use in Backlight Functions.

<code>#define SUSI_ID_STORAGE_STD</code>	0x00000000
<code>#define SUSI_ID_STORAGE_OEM0</code>	0x00000001
<code>#define SUSI_ID_STORAGE_OEM1</code>	0x00000002

### Description

Storage device ID, use in Storage Functions.

<code>#define SUSI_ID_THERMAL_PROTECT_1</code>	0
--	---

<code>#define SUSI_ID_THERMAL_PROTECT_2</code>	1
<code>#define SUSI_ID_THERMAL_PROTECT_3</code>	2
<code>#define SUSI_ID_THERMAL_PROTECT_4</code>	3

#### **Description**

Thermal protection device ID, use in Thermal Protection Functions

<code>#define SUSI_ID_WATCHDOG_1</code>	0
<code>#define SUSI_ID_WATCHDOG_2</code>	1
<code>#define SUSI_ID_WATCHDOG_3</code>	2

#### **Description**

Watchdog device ID, use in Watchdog Functions.

## 2.3 Item ID

<code>#define SUSI_ID_I2C_MAXIMUM_BLOCK_LENGTH</code>	0x00000000
---	------------

### Description

Watchdog capabilities item ID, use in SusiI2CGetCaps.

<code>#define SUSI_ID_GPIO_INPUT_SUPPORT</code>	0x00000000
---	------------

<code>#define SUSI_ID_GPIO_OUTPUT_SUPPORT</code>	0x00000001
--	------------

### Description

GPIO capabilities item ID, use in SusiGPIOGetCaps.

<code>#define SUSI_ID_VGA_BRIGHTNESS_MAXIMUM</code>	0x00010000
---	------------

<code>#define SUSI_ID_VGA_BRIGHTNESS_MINIMUM</code>	0x00010001
---	------------

### Description

VGA capabilities item ID, use in SusiVgaGetCaps.

<code>#define SUSI_ID_STORAGE_TOTAL_SIZE</code>	0x00000000
---	------------

<code>#define SUSI_ID_STORAGE_BLOCK_SIZE</code>	0x00000001
---	------------

<code>#define SUSI_ID_STORAGE_LOCK_STATUS</code>	0x00010000
--	------------

<code>#define SUSI_ID_STORAGE_PSW_MAX_LEN</code>	0x00010000
--	------------

### Description

Storage capabilities item ID, use in SusiStorageGetCaps.

<code>#define SUSI_ID_WDT_DELAY_MAXIMUM</code>	0x00000001
--	------------

<code>#define SUSI_ID_WDT_DELAY_MINIMUM</code>	0x00000002
--	------------

<code>#define SUSI_ID_WDT_EVENT_MAXIMUM</code>	0x00000003
--	------------

<code>#define SUSI_ID_WDT_EVENT_MINIMUM</code>	0x00000004
--	------------

<code>#define SUSI_ID_WDT_RESET_MAXIMUM</code>	0x00000005
--	------------

<code>#define SUSI_ID_WDT_RESET_MINIMUM</code>	0x00000006
--	------------

<code>#define SUSI_ID_WDT_UNIT_MINIMUM</code>	0x0000000F
---	------------

<code>#define SUSI_ID_WDT_DELAY_TIME</code>	0x00010001
---	------------

<code>#define SUSI_ID_WDT_EVENT_TIME</code>	0x00010002
---	------------

<code>#define SUSI_ID_WDT_RESET_TIME</code>	0x00010003
---	------------

<code>#define SUSI_ID_WDT_EVENT_TYPE</code>	0x00010004
---	------------

### Description

Watchdog capabilities item ID, use in SusiWDogGetCaps.

<code>#define SUSI_ID_FC_CONTROL_SUPPORT_FLAGS</code>	0x00000000
---	------------

<code>#define SUSI_ID_FC_AUTO_SUPPORT_FLAGS</code>	0x00000001
--	------------

## Description

Fan control capabilities item ID, use in SusiFanControlGetCaps.

<code>#define SUSI_ID_TP_EVENT_SUPPORT_FLAGS</code>	0x00000000
<code>#define SUSI_ID_TP_EVENT_TRIGGER_MAXIMUM</code>	0x00000001
<code>#define SUSI_ID_TP_EVENT_TRIGGER_MINIMUM</code>	0x00000002
<code>#define SUSI_ID_TP_EVENT_CLEAR_MAXIMUM</code>	0x00000003
<code>#define SUSI_ID_TP_EVENT_CLEAR_MINIMUM</code>	0x00000004

## Description

Thermal protection capabilities item ID, use in SusiThermalProtectionGetCaps.

### 3 SUSI API

The SUSI API provides the functions to control ADVANTECH platforms. SUSI API functions are based on a dynamic library. SUSI API can be implemented in various other programming languages.

#### 3.1 Initialization Functions

##### 3.1.1 SusiLibInitialize

```
uint32_t SUSI_API SusiLibInitialize(void)
```

###### Description:

General initialization of the SUSI API. Prior to calling any SUSI API function the library needs to be initialized by calling this function. The status code for all SUSI API function will be SUSI\_STATUS\_NOT\_INITIALIZED unless this function is called.

###### Parameters:

None

###### Return Status Code:

Condition	Return Value
Library initialized	SUSI_STATUS_INITIALIZED
Library initial fail	SUSI_STATUS_NOT_INITIALIZED
Success	SUSI_STATUS_SUCCESS

##### 3.1.2 SusiLibUninitialize

```
uint32_t SUSI_API SusiLibUninitialize(void)
```

###### Description:

General function to uninitialized the SUSI API library that should be called before program exit. In a dynamic library environment this function is not expected to replace the native uninitialized routines. It is expected that in this environments this function has no functionality.

###### Parameters:

None

**Return Status Code:**

---

<b>Condition</b>	<b>Return Value</b>
Library uninitialized	SUSI_STATUS_NOT_INITIALIZED
Success	SUSI_STATUS_SUCCESS

---

## 3.2 Information Functions

### 3.2.1 SusiBoardGetValue

```
uint32_t SUSI_API SusiBoardGetValue(uint32_t Id, uint32_t *pValue)
```

#### Description:

Information about the hardware platform in value format.

#### Parameters:

##### Id

Selects target value. See **Table 1~**

**Table 5.**

##### pValue

Pointer to a buffer that receives the value's data.

#### Return Status Code:

Condition	Return Value
Library uninitialized	SUSI_STATUS_NOT_INITIALIZED
pValue==NULL	SUSI_STATUS_INVALID_PARAMETER
Unknown Id	SUSI_STATUS_UNSUPPORTED
Device unsupported	SUSI_STATUS_UNSUPPORTED
Success	SUSI_STATUS_SUCCESS

**Table 1** Board information value ID

Id	Description	Unit
SUSI_ID_GET_SPEC_VERSION	API Specification Version	
SUSI_ID_BOARD_BOOT_COUNTER_VAL	Boot Counter	1 boot
SUSI_ID_BOARD_RUNNING_TIME_METER_VAL	Running Time Meter	1 hour
SUSI_ID_BOARD_PNPID_VAL	Board Vendor PNPID	
SUSI_ID_BOARD_PLATFORM_REV_VAL	Platform revision	
SUSI_ID_BOARD_DRIVER_VERSION_VAL	Driver version	
SUSI_ID_BOARD_LIB_VERSION_VAL	Library version	
SUSI_ID_BOARD_FIRMWARE_VERSION_VAL	Firmware version	

**Table 2** Board voltage value ID

Id	Description	Unit
----	-------------	------

SUSI_ID_HWM_VOLTAGE_VCORE	CPU Core voltage	millivolts
SUSI_ID_HWM_VOLTAGE_VCORE2	Second CPU Core voltage	millivolts
SUSI_ID_HWM_VOLTAGE_2V5	2.5V	millivolts
SUSI_ID_HWM_VOLTAGE_3V3	3.3V	millivolts
SUSI_ID_HWM_VOLTAGE_5V	5V	millivolts
SUSI_ID_HWM_VOLTAGE_12V	12V	millivolts
SUSI_ID_HWM_VOLTAGE_5VSB	5V Standby	millivolts

	SUSI_I2C_OEM1_SUPPORTED
	SUSI_I2C_OEM2_SUPPORTED

### 3.2.2 SusiBoardGetStringA

```
uint32_t SUSI_API SusiBoardGetStringA(uint32_t Id, char *pBuffer, uint32_t *pBufLen)
```

**Description:**

Text information about the hardware platform.

**Parameters:**

**Id**

Selects target string. See **Table 6**.

**pBuffer**

Pointer to a buffer that receives the value's data.

**pBufLen**

Pointer to a variable that specifies the size, in bytes, of the buffer pointed to by the pBuffer parameter. When the function returns, this variable contains the size of the data copied to pBuffer including the terminating null character.

**Return Status Code:**

Condition	Return Value
Library uninitialized	SUSI_STATUS_NOT_INITIALIZED
pBufLen==NULL	SUSI_STATUS_INVALID_PARAMETER
pBufLen!=NULL&&*pBufLen&&pBuffer==NULL	SUSI_STATUS_INVALID_PARAMETER
Unknown Id	SUSI_STATUS_UNSUPPORTED
Device unsupported	SUSI_STATUS_UNSUPPORTED
strlen + 1 > *pBufLen	SUSI_STATUS_MORE_DATA
Success	SUSI_STATUS_SUCCESS

**Table 6 Board information string ID**

Id	Description

### 3.3 Backlight Functions

This function sub set facilitates backlight control for Integrated flat panel displays, typically LVDS.

**Table 7 Backlight ID**

<b>Id</b>	<b>Description</b>
SUSI_ID_BACKLIGHT_1	Backlight Local Flat Panel 1
SUSI_ID_BACKLIGHT_2	Backlight Local Flat Panel 2
SUSI_ID_BACKLIGHT_3	Backlight Local Flat Panel 3

**Table 8 Backlight Enable Values**

<b>Name</b>	<b>Description</b>
SUSI_BACKLIGHT_SET_ON	Signifies that the Backlight be Enabled
SUSI_BACKLIGHT_SET_OFF	Signifies that the Backlight be Disabled

#### 3.3.1 SusiVgaGetCaps

```
uint32_t SUSI_API SusiVgaGetCaps(uint32_t Id, uint32_t ItemId, uint32_t *pValue);
```

**Description:**

Gets VGA capabilities.

**Parameters:**

**Id**

Selects target device. See **Table 7**.

**ItemId**

Selects target capability. See **Table 9**.

**pValue**

Pointer to a buffer that receives the target capability.

**Return Status Code:**

<b>Condition</b>	<b>Return Value</b>
Library uninitialized	SUSI_STATUS_NOT_INITIALIZED
pValue==NULL	SUSI_STATUS_INVALID_PARAMETER
Unknown Id or ItemId	SUSI_STATUS_UNSUPPORTED
Success	SUSI_STATUS_SUCCESS

**Table 9 VGA capabilities item Id**

Item Id	Description
SUSI_ID_VGA_BRIGHTNESS_MAXIMUM	Maximum backlight value
SUSI_ID_VGA_BRIGHTNESS_MINIMUM	Minimum backlight value

### 3.3.2 SusiVgaGetBacklightEnable

```
uint32_t SUSI_API SusiVgaGetBacklightEnable(uint32_t Id, uint32_t *pEnable)
```

**Description:**

Gets current Backlight Enable state for specified Flat Panel.

**Parameters:****Id**

Selects target device. See **Table 7**.

**pEnable**

Pointer to a buffer that receives the current backlight enable state. See **Table 8**.

**Return Status Code:**

Condition	Return Value
Library uninitialized	SUSI_STATUS_NOT_INITIALIZED
pEnable==NULL	SUSI_STATUS_INVALID_PARAMETER
Unknown Id	SUSI_STATUS_UNSUPPORTED
Device unsupported	SUSI_STATUS_UNSUPPORTED
Success	SUSI_STATUS_SUCCESS

### 3.3.3 SusiVgaSetBacklightEnable

```
uint32_t SUSI_API SusiVgaSetBacklightEnable(uint32_t Id, uint32_t Enable)
```

**Description:**

Enables or disable the backlight of the selected flat panel display

**Parameters:****Id**

Selects target device. See **Table 7**.

**Enable**

Backlight Enable options. See **Table 8**.

**Return Status Code:**

Condition	Return Value
Library uninitialized	SUSI_STATUS_NOT_INITIALIZED
Unknown Id	SUSI_STATUS_UNSUPPORTED
Device unsupported	SUSI_STATUS_UNSUPPORTED
Success	SUSI_STATUS_SUCCESS

### 3.3.4 SusiVgaGetBacklightBrightness

```
uint32_t SUSI_API SusiVgaGetBacklightBrightness(uint32_t Id, uint32_t *pBright)
```

**Description:**

Reads the current brightness of the selected flat panel display.

**Parameters:****Id**

Selects target device. See **Table 7**.

**pBright**

Pointer to a buffer that receives the current backlight brightness value.

**Return Status Code:**

Condition	Return Value
Library uninitialized	SUSI_STATUS_NOT_INITIALIZED
pBright==NULL	SUSI_STATUS_INVALID_PARAMETER
Unknown Id	SUSI_STATUS_UNSUPPORTED
Device unsupported	SUSI_STATUS_UNSUPPORTED
Success	SUSI_STATUS_SUCCESS

### 3.3.5 SusiVgaSetBacklightBrightness

```
uint32_t SUSI_API SusiVgaSetBacklightBrightness(uint32_t Id, uint32_t Bright)
```

**Description:**

Reads the current brightness of the selected flat panel display.

**Parameters:****Id**

Selects target device. See **Table 7**.

**Bright**

Backlight Brightness value.

**Return Status Code:**

Condition	Return Value
Library uninitialized	SUSI_STATUS_NOT_INITIALIZED
Bright > MAX value    Bright < MIN value	SUSI_STATUS_INVALID_PARAMETER
Unknown Id	SUSI_STATUS_UNSUPPORTED
Device unsupported	SUSI_STATUS_UNSUPPORTED
Success	SUSI_STATUS_SUCCESS

### 3.3.6 SusiVgaGetBacklightLevel

```
uint32_t SUSI_API SusiVgaGetBacklightLevel(uint32_t Id, uint32_t *pLevel)
```

**Description:**

Reads the current brightness level of the selected flat panel display.

**Parameters:**

**Id**

Selects target device. See **Table 7**.

**pLevel**

Pointer to a buffer that receives the current backlight brightness level. See **Table 10**.

**Return Status Code:**

Condition	Return Value
Library uninitialized	SUSI_STATUS_NOT_INITIALIZED
pLevel==NULL	SUSI_STATUS_INVALID_PARAMETER
Unknown Id	SUSI_STATUS_UNSUPPORTED
Device unsupported	SUSI_STATUS_UNSUPPORTED
Success	SUSI_STATUS_SUCCESS

**Table 10 Brightness level range definition**

Name	Description
SUSI_BACKLIGHT_LEVEL_MAXIMUM	Maximum backlight level is 9
SUSI_BACKLIGHT_LEVEL_MINIMUM	Minimum backlight level is 0

### 3.3.7 SusiVgaSetBacklightLevel

```
uint32_t SUSI_API SusiVgaSetBacklightLevel(uint32_t Id, uint32_t Level)
```

**Description:**

Sets the brightness level of the selected flat panel display.

**Parameters:****Id**

Selects target device. See **Table 7**.

**Level**

Backlight Brightness level. See **Table 10**.

**Return Status Code:**

Condition	Return Value
Library uninitialized	SUSI_STATUS_NOT_INITIALIZED
Level>SUSI_BACKLIGHT_LEVEL_MAXIMUM	SUSI_STATUS_INVALID_PARAMETER
Unknown Id	SUSI_STATUS_UNSUPPORTED
Device unsupported	SUSI_STATUS_UNSUPPORTED
Success	SUSI_STATUS_SUCCESS

### 3.3.8 SusiVgaGetPolarity

```
uint32_t SUSI_API SusiVgaGetPolarity(uint32_t Id, uint32_t *pPolarity)
```

**Description:**

Reads the current backlight polarity of the selected flat panel display.

**Parameters:****Id**

Selects target device. See **Table 7**.

**pPolarity**

Pointer to a buffer that receives the current backlight polarity. See **Table 11**.

**Return Status Code:**

Condition	Return Value
Library uninitialized	SUSI_STATUS_NOT_INITIALIZED
pPolarity==NULL	SUSI_STATUS_INVALID_PARAMETER
Unknown Id	SUSI_STATUS_UNSUPPORTED
Success	SUSI_STATUS_SUCCESS

**Table 11 Brightness polarity definition**

Name	Description
SUSI_BACKLIGHT_POLARITY_ON	Backlight signal polarity ON
SUSI_BACKLIGHT_POLARITY_OFF	Backlight signal polarity OFF

### 3.3.9 SusiVgaSetPolarity

```
uint32_t SUSI_API SusiVgaSetPolarity(uint32_t Id, uint32_t Polarity)
```

**Description:**

Sets the polarity of the selected flat panel display.

**Parameters:****Id**

Selects target device. See **Table 7**.

**Polarity**

Polarity state. See **Table 11**.

**Return Status Code:**

Condition	Return Value
Library uninitialized	SUSI_STATUS_NOT_INITIALIZED
Unknown Id	SUSI_STATUS_UNSUPPORTED
Success	SUSI_STATUS_SUCCESS

### 3.3.10 SusiVgaGetFrequency

```
uint32_t SUSI_API SusiVgaGetFrequency(uint32_t Id, uint32_t *pFrequency)
```

**Description:**

Reads the current backlight frequency of the selected flat panel display.

**Parameters:****Id**

Selects target device. See **Table 7**.

**pFrequency**

Pointer to a buffer that receives the current backlight frequency. (Unit: Hz)

**Return Status Code:**

Condition	Return Value

Library uninitialized	SUSI_STATUS_NOT_INITIALIZED
pFrequency==NULL	SUSI_STATUS_INVALID_PARAMETER
Unknown Id	SUSI_STATUS_UNSUPPORTED
Device unsupported	SUSI_STATUS_UNSUPPORTED
Success	SUSI_STATUS_SUCCESS

### 3.3.11 SusiVgaSetFrequency

```
uint32_t SUSI_API SusiVgaSetFrequency(uint32_t Id, uint32_t Frequency)
```

**Description:**

Sets the frequency of the selected flat panel display.

**Parameters:**

**Id**

Selects target device. See **Table 7**.

**Polarity**

Frequency value. (Unit: Hz)

**Return Status Code:**

Condition	Return Value
Library uninitialized	SUSI_STATUS_NOT_INITIALIZED
Unknown Id	SUSI_STATUS_UNSUPPORTED
Device unsupported	SUSI_STATUS_UNSUPPORTED
Success	SUSI_STATUS_SUCCESS

### 3.3.12 SusiVgaGetScreenEnable

```
uint32_t SUSI_API SusiVgaGetScreenEnable(uint32_t Id, uint32_t *pEnable)
```

**Description:**

Reads the current screen status of the selected device

**Parameters:**

**Id**

Selects target device.

**pEnable**

Pointer to a buffer that receives the current screen state. See **Table 12**.

**Return Status Code:**

Condition	Return Value
Library uninitialized	SUSI_STATUS_NOT_INITIALIZED
pEnable==NULL	SUSI_STATUS_INVALID_PARAMETER
Unknown Id	SUSI_STATUS_UNSUPPORTED
Device unsupported	SUSI_STATUS_UNSUPPORTED
Success	SUSI_STATUS_SUCCESS

**Table 12 Screen status definition**

Name	Description
SUSI_SCREEN_ON	Screen ON
SUSI_SCREEN_OFF	Screen OFF

### 3.3.13 SusiVgaSetSrceenEnable

```
uint32_t SUSI_API SusiVgaSetScreenEnable(uint32_t Id, uint32_t Enable)
```

**Description:**

Sets the screen state of the selected device.

**Parameters:****Id**

Selects target device.

**Enable**

Screen state. See **Table 12**.

**Return Status Code:**

Condition	Return Value
Library uninitialized	SUSI_STATUS_NOT_INITIALIZED
Unknown Id	SUSI_STATUS_UNSUPPORTED
Device unsupported	SUSI_STATUS_UNSUPPORTED
Success	SUSI_STATUS_SUCCESS

## 3.4 I<sup>2</sup>C Functions

I<sup>2</sup>C APIs supports standard 7 and 10 bits slave address mode. I<sup>2</sup>C API also supports word command, it need encode before set to parameter, see Table 14

**Table 13 I<sup>2</sup>C ID**

<b>Id</b>	<b>Description</b>
SUSI_ID_I2C_EXTERNAL	Main I <sup>2</sup> C host device
SUSI_ID_I2C_OEM0~2	Other I <sup>2</sup> C host devices

**Table 14 I<sup>2</sup>C command encode**

<b>Type</b>	<b>Description</b>
Standard command	Byte command
Extend command	Word command   0x8000000000 Ex. 0x8000FABC
No command	0x4000xxxx, ignore command parameter

### 3.4.1 SusiI2CGetCaps

```
uint32_t SUSI_API SusiI2CGetCaps(uint32_t Id, uint32_t ItemId, uint32_t *pValue)
```

#### Description:

Gets I<sup>2</sup>C capabilities.

#### Parameters:

##### **Id**

Selects target device. See **Table 13**.

##### **ItemId**

Selects target capability. See **Table 15**.

##### **pValue**

Pointer to a buffer that receives the target capability.

#### Return Status Code:

<b>Condition</b>	<b>Return Value</b>
Library uninitialized	SUSI_STATUS_NOT_INITIALIZED
pValue==NULL	SUSI_STATUS_INVALID_PARAMETER
Unknown Id or ItemId	SUSI_STATUS_UNSUPPORTED
Success	SUSI_STATUS_SUCCESS

**Table 15 I2C capabilities item Id**

Item Id	Description
SUSI_ID_I2C_MAXIMUM_BLOCK_LENGTH	I2C maximum block length

### 3.4.2 SusiI2CWriteReadCombine

```
uint32_t SUSI_API SusiI2CWriteReadCombine(uint32_t Id, uint8_t Addr,
                                         uint8_t *pWBuffer, uint32_t WriteLen, uint8_t *pRBuffer, uint32_t ReadLen)
```

**Description:**

Universal function for read and write operations to the I<sup>2</sup>C bus.

**Parameters:**

**Id**

Selects target device. See **Table 15**.

**Addr**

First byte of I<sup>2</sup>C device address. 7-bit address only.

**pWBuffer**

Pointer to a buffer containing the data to be transferred. This parameter can be NULL if the data is not required.

**WriteLen**

Size in bytes of the information pointed to by the pWBuffer parameter. If pWBuffer is NULL this will be ignored.

**pRBuffer**

Pointer to a buffer that receives the read data. This parameter can be NULL if the data is not required.

**ReadLen**

Size in bytes of the buffer pointed to by the pRBuffer parameter. If pRBuffer is NULL this will be ignored.

**Return Status Code:**

Condition	Return Value
Library uninitialized	SUSI_STATUS_NOT_INITIALIZED
(WriteLen>1)&&(pWBuffer==NULL)	SUSI_STATUS_INVALID_PARAMETER
(RBufLen>1)&&(pRBuffer==NULL)	SUSI_STATUS_INVALID_PARAMETER
(WriteLen==0)&&(RBufLen==0)	SUSI_STATUS_INVALID_PARAMETER

Unknown Id	SUSI_STATUS_UNSUPPORTED
Bus Busy SDA/SDC low	SUSI_STATUS_BUSY_COLLISION
Arbitration Error/Collision Error	
On Write 1 write cycle	SUSI_STATUS_BUSY_COLLISION
SDA Remains low	
Time-out due to clock stretching	SUSI_STATUS_TIMEOUT
Address Non-ACK	SUSI_STATUS_NOT_FOUND
Write Non-ACK	SUSI_STATUS_WRITE_ERROR
Success	SUSI_STATUS_SUCCESS

### 3.4.3 SusiI2CReadTransfer

```
uint32_t SUSI_API SusiI2CReadTransfer(uint32_t Id, uint32_t Addr, uint32_t Cmd,
uint8_t *pBuffer, uint32_t ReadLen)
```

#### Description:

Reads from a specific register in the selected I<sup>2</sup>C device. Reads from I<sup>2</sup>C device at the I<sup>2</sup>C address Addr the amount of ReadLen bytes to the buffer pBuffer while using the device specific command Cmd. Depending on the addressed I<sup>2</sup>C device Cmd can be a specific command or a byte offset.

#### Parameters:

##### Id

Selects target device. See **Table 15**.

##### Addr

Encoded 7/10 Bit I<sup>2</sup>C Device Address.

##### Cmd

Encoded I<sup>2</sup>C Device Command / Index. See **Table 14**.

##### pBuffer

Pointer to a buffer that receives the read data.

##### ReadLen

Size in bytes of the buffer pointed to by the pBuffer parameter.

#### Return Status Code:

Condition	Return Value
Library uninitialized	SUSI_STATUS_NOT_INITIALIZED
pBuffer==NULL    ReadLen==0	SUSI_STATUS_INVALID_PARAMETER
Unknown Id	SUSI_STATUS_UNSUPPORTED
Bus Busy SDA/SDC low	SUSI_STATUS_BUSY_COLLISION

---

Arbitration Error/Collision Error	
On Write 1 write cycle	SUSI_STATUS_BUSY_COLLISION
SDA Remains low	
Time-out due to clock stretching	
Address Non-ACK	SUSI_STATUS_TIMEOUT
Write Non-ACK	SUSI_STATUS_NOT_FOUND
Success	SUSI_STATUS_WRITE_ERROR
Success	

---

### 3.4.4 Susi2CWriteTransfer

```
uint32_t SUSI_API Susi2CWriteTransfer(uint32_t Id, uint32_t Addr, uint32_t Cmd,
uint8_t *pBuffer, uint32_t ByteCnt)
```

#### Description:

Write to a specific register in the selected I<sup>2</sup>C device. Writes to an I<sup>2</sup>C device at the I<sup>2</sup>C address Addr the amount of ByteCnt bytes from the buffer \*pBuffer while using the device specific command Cmd. Depending on the addressed I<sup>2</sup>C device Cmd can be a specific command or a byte offset

#### Parameters:

##### Id

Selects target device. See **Table 15**.

##### Addr

Encoded 7/10 Bit I<sup>2</sup>C Device Address.

##### Cmd

Encoded I<sup>2</sup>C Device Command / Index. See **Table 14**.

##### pBuffer

Pointer to a buffer that receives the write data.

##### ByteCnt

Size in bytes of the buffer pointed to by the pBuffer parameter.

#### Return Status Code:

---

Condition	Return Value
Library uninitialized	SUSI_STATUS_NOT_INITIALIZED
pBuffer==NULL    ByteCnt==0	SUSI_STATUS_INVALID_PARAMETER
ByteCnt > MaxLength	SUSI_STATUS_INVALID_BLOCK_LENGTH
Unknown Id	SUSI_STATUS_UNSUPPORTED
Bus Busy SDA/SDC low	SUSI_STATUS_BUSY_COLLISION

---

---

Arbitration Error/Collision Error	
On Write 1 write cycle	SUSI_STATUS_BUSY_COLLISION
SDA Remains low	
Time-out due to clock stretching	
Address Non-ACK	SUSI_STATUS_TIMEOUT
Write Non-ACK	SUSI_STATUS_NOT_FOUND
Success	SUSI_STATUS_WRITE_ERROR
Success	

---

### 3.4.5 Susi2CProbeDevice

`uint32_t SUSI_API Susi2CProbeDevice(uint32_t Id, uint32_t Addr)`

**Description:**

Probes I<sup>2</sup>C address to test I<sup>2</sup>C device present.

**Parameters:**

**Id**

Selects target device. See **Table 15**.

**Addr**

Encoded 7/10 Bit I<sup>2</sup>C Device Address.

**Return Status Code:**

---

Condition	Return Value
Library uninitialized	SUSI_STATUS_NOT_INITIALIZED
Unknown Id	SUSI_STATUS_UNSUPPORTED
Bus Busy SDA/SDC low	SUSI_STATUS_BUSY_COLLISION
Arbitration Error/Collision Error	
On Write 1 write cycle	SUSI_STATUS_BUSY_COLLISION
SDA Remains low	
Time-out due to clock stretching	SUSI_STATUS_TIMEOUT
Address Non-ACK	SUSI_STATUS_NOT_FOUND
Write Non-ACK	SUSI_STATUS_WRITE_ERROR
Success	SUSI_STATUS_SUCCESS

---

### 3.4.6 Susi2CGetFrequency

`uint32_t SUSI_API Susi2CGetFrequency(uint32_t Id, uint32_t *pFreq)`

**Description:**

Get I<sup>2</sup>C clock frequency.

**Parameters:**

**Id**

Selects target device. See **Table 15**.

**pFreq**

Pointer to a buffer that receives the I<sup>2</sup>C clock frequency value. (Unit: Hz)

**Return Status Code:**

Condition	Return Value
Library uninitialized	SUSI_STATUS_NOT_INITIALIZED
Unknown Id	SUSI_STATUS_UNSUPPORTED
Device unsupported	SUSI_STATUS_UNSUPPORTED
pFreq == NULL	SUSI_STATUS_INVALID_PARAMETER
Success	SUSI_STATUS_SUCCESS

### 3.4.7 SusiI2CSetFrequency

```
uint32_t SUSI_API SusiI2CSetFrequency(uint32_t Id, uint32_t Freq)
```

**Description:**

Set I<sup>2</sup>C clock frequency.

**Parameters:**

**Id**

Selects target device. See **Table 15**.

**Freq**

I<sup>2</sup>C clock frequency value. (Unit: Hz)

**Return Status Code:**

Condition	Return Value
Library uninitialized	SUSI_STATUS_NOT_INITIALIZED
Unknown Id	SUSI_STATUS_UNSUPPORTED
Device unsupported	SUSI_STATUS_UNSUPPORTED
Success	SUSI_STATUS_SUCCESS

## 3.5 SMBus Functions

SMBus is the System Management Bus defined by Intel® Corporation in 1995. It is used in personal computers and servers for low-speed system management communications.

**Table 16 SMBus ID**

<b>Id</b>	<b>Description</b>
SUSI_ID_SMBUS_EXTERNAL	Main SMBus host device
SUSI_ID_SMBUS_OEM0~3	Other SMBus host devices

### 3.5.1 SusiSMBReadByte

```
uint32_t SUSI_API SusiSMBReadByte(uint32_t Id, uint8_t Addr, uint8_t Cmd, uint8_t
*pBuffer)
```

**Description:**

Read a byte of data from the target slave device in the SMBus.

**Parameters:**

**Id**

Selects target device. See **Table 16**.

**Addr**

Specifies the 8-bit device address, ranging from 0x00 to 0xFF. Whether to give a 1 (read) or 0 (write) to the LSB of slave address could be ignored.

**Cmd**

Specifies the offset or command of the device register to read data from.

**pBuffer**

Pointer to a variable in which the function reads the byte data.

**Return Status Code:**

<b>Condition</b>	<b>Return Value</b>
Library uninitialized	SUSI_STATUS_NOT_INITIALIZED
pBuffer==NULL	SUSI_STATUS_INVALID_PARAMETER
Unknown Id	SUSI_STATUS_UNSUPPORTED
Bus Busy SDA/SDC low	SUSI_STATUS_BUSY_COLLISION
Arbitration Error/Collision Error	
On Write 1 write cycle	SUSI_STATUS_BUSY_COLLISION
SDA Remains low	

Time-out due to clock stretching	SUSI_STATUS_TIMEOUT
Address Non-ACK	SUSI_STATUS_NOT_FOUND
Write Non-ACK	SUSI_STATUS_WRITE_ERROR
Success	SUSI_STATUS_SUCCESS

### 3.5.2 SusiSMBWriteByte

```
uint32_t SUSI_API SusiSMBWriteByte(uint32_t Id, uint8_t Addr, uint8_t Cmd, uint8_t Data)
```

#### Description:

Write a byte of data to the target slave device in the SMBus.

#### Parameters:

##### Id

Selects target device. See **Table 16**.

##### Addr

Specifies the 8-bit device address, ranging from 0x00 to 0xFF. Whether to give a 1 (read) or 0 (write) to the LSB of slave address could be ignored.

##### Cmd

Specifies the offset or command of the device register to write data to.

##### Data

Specifies the byte data to be written.

#### Return Status Code:

Condition	Return Value
Library uninitialized	SUSI_STATUS_NOT_INITIALIZED
Unknown Id	SUSI_STATUS_UNSUPPORTED
Bus Busy SDA/SDC low	SUSI_STATUS_BUSY_COLLISION
Arbitration Error/Collision Error	
On Write 1 write cycle	SUSI_STATUS_BUSY_COLLISION
SDA Remains low	
Time-out due to clock stretching	SUSI_STATUS_TIMEOUT
Address Non-ACK	SUSI_STATUS_NOT_FOUND
Write Non-ACK	SUSI_STATUS_WRITE_ERROR
Success	SUSI_STATUS_SUCCESS

### 3.5.3 SusiSMBReadWord

```
uint32_t SUSI_API SusiSMBReadWord(uint32_t Id, uint8_t Addr, uint8_t Cmd, uint16_t
```

`*pBuffer)`

**Description:**

Read a word of data from the target slave device in the SMBus.

**Parameters:**

**Id**

Selects target device. See **Table 16**.

**Addr**

Specifies the 8-bit device address, ranging from 0x00 to 0xFF. Whether to give a 1 (read) or 0 (write) to the LSB of slave address could be ignored.

**Cmd**

Specifies the offset or command of the device register to read data from.

**pBuffer**

Pointer to a variable in which the function reads the word data.

**Return Status Code:**

Condition	Return Value
Library uninitialized	SUSI_STATUS_NOT_INITIALIZED
pBuffer==NULL	SUSI_STATUS_INVALID_PARAMETER
Unknown Id	SUSI_STATUS_UNSUPPORTED
Bus Busy SDA/SDC low	SUSI_STATUS_BUSY_COLLISION
Arbitration Error/Collision Error	
On Write 1 write cycle	SUSI_STATUS_BUSY_COLLISION
SDA Remains low	
Time-out due to clock stretching	SUSI_STATUS_TIMEOUT
Address Non-ACK	SUSI_STATUS_NOT_FOUND
Write Non-ACK	SUSI_STATUS_WRITE_ERROR
Success	SUSI_STATUS_SUCCESS

### 3.5.4 SusiSMBWriteWord

```
uint32_t SUSI_API SusiSMBWriteWord(uint32_t Id, uint8_t Addr, uint8_t Cmd,  
uint16_t Data)
```

**Description:**

Write a word of data to the target slave device in the SMBus.

**Parameters:**

**Id**

Selects target device. See **Table 16**.

**Addr**

Specifies the 8-bit device address, ranging from 0x00 to 0xFF. Whether to give a 1 (read) or 0 (write) to the LSB of slave address could be ignored.

**Cmd**

Specifies the offset or command of the device register to write data to.

**Data**

Specifies the word data to be written.

**Return Status Code:**

Condition	Return Value
Library uninitialized	SUSI_STATUS_NOT_INITIALIZED
Unknown Id	SUSI_STATUS_UNSUPPORTED
Bus Busy SDA/SDC low	SUSI_STATUS_BUSY_COLLISION
Arbitration Error/Collision Error	
On Write 1 write cycle	SUSI_STATUS_BUSY_COLLISION
SDA Remains low	
Time-out due to clock stretching	SUSI_STATUS_TIMEOUT
Address Non-ACK	SUSI_STATUS_NOT_FOUND
Write Non-ACK	SUSI_STATUS_WRITE_ERROR
Success	SUSI_STATUS_SUCCESS

### 3.5.5 SusiSMBReceiveByte

```
uint32_t SUSI_API SusiSMBReceiveByte(uint32_t Id, uint8_t Addr, uint8_t *pBuffer)
```

**Description:**

Receive a byte of data from the target slave device in the SMBus.

**Parameters:****Id**

Selects target device. See **Table 16**.

**Addr**

Specifies the 8-bit device address, ranging from 0x00 to 0xFF. Whether to give a 1 (read) or 0 (write) to the LSB of slave address could be ignored.

**pBuffer**

Pointer to a variable in which the function receive the byte data.

**Return Status Code:**

Condition	Return Value
Library uninitialized	SUSI_STATUS_NOT_INITIALIZED
pBuffer==NULL	SUSI_STATUS_INVALID_PARAMETER
Unknown Id	SUSI_STATUS_UNSUPPORTED
Bus Busy SDA/SDC low	SUSI_STATUS_BUSY_COLLISION
Arbitration Error/Collision Error	
On Write 1 write cycle	SUSI_STATUS_BUSY_COLLISION
SDA Remains low	
Time-out due to clock stretching	SUSI_STATUS_TIMEOUT
Address Non-ACK	SUSI_STATUS_NOT_FOUND
Write Non-ACK	SUSI_STATUS_WRITE_ERROR
Success	SUSI_STATUS_SUCCESS

### 3.5.6 SusiSMBSendByte

```
uint32_t SUSI_API SusiSMBSendByte(uint32_t Id, uint8_t Addr, uint8_t Cmd, uint8_t Data)
```

**Description:**

Send a byte of data to the target slave device in the SMBus.

**Parameters:****Id**

Selects target device. See **Table 16**.

**Addr**

Specifies the 8-bit device address, ranging from 0x00 to 0xFF. Whether to give a 1 (read) or 0 (write) to the LSB of slave address could be ignored.

**Data**

Specifies the word data to be sent.

**Return Status Code:**

Condition	Return Value
Library uninitialized	SUSI_STATUS_NOT_INITIALIZED
Unknown Id	SUSI_STATUS_UNSUPPORTED
Bus Busy SDA/SDC low	SUSI_STATUS_BUSY_COLLISION
Arbitration Error/Collision Error	
On Write 1 write cycle	SUSI_STATUS_BUSY_COLLISION
SDA Remains low	

Time-out due to clock stretching	SUSI_STATUS_TIMEOUT
Address Non-ACK	SUSI_STATUS_NOT_FOUND
Write Non-ACK	SUSI_STATUS_WRITE_ERROR
Success	SUSI_STATUS_SUCCESS

### 3.5.7 SusiSMBReadQuick

```
uint32_t SUSI_API SusiSMBReadQuick(uint32_t Id, uint8_t Addr)
```

**Description:**

Turn SMBus device function off (on) or disable (enable) a specific device mode..

**Parameters:**

**Id**

Selects target device. See **Table 16**.

**Addr**

Specifies the 8-bit device address, ranging from 0x00 to 0xFF. Whether to give a 1 (read) or 0 (write) to the LSB of slave address could be ignored.

**Return Status Code:**

Condition	Return Value
Library uninitialized	SUSI_STATUS_NOT_INITIALIZED
Unknown Id	SUSI_STATUS_UNSUPPORTED
Bus Busy SDA/SDC low	SUSI_STATUS_BUSY_COLLISION
Arbitration Error/Collision Error	
On Write 1 write cycle	SUSI_STATUS_BUSY_COLLISION
SDA Remains low	
Time-out due to clock stretching	SUSI_STATUS_TIMEOUT
Address Non-ACK	SUSI_STATUS_NOT_FOUND
Success	SUSI_STATUS_SUCCESS

### 3.5.8 SusiSMBWriteQuick

```
uint32_t SUSI_API SusiSMBWriteQuick(uint32_t Id, uint8_t Addr)
```

**Description:**

Turn SMBus device function off (on) or disable (enable) a specific device mode..

**Parameters:**

**Id**

Selects target device. See **Table 16**.

**Addr**

Specifies the 8-bit device address, ranging from 0x00 to 0xFF. Whether to give a 1 (read) or 0 (write) to the LSB of slave address could be ignored.

**Return Status Code:**

Condition	Return Value
Library uninitialized	SUSI_STATUS_NOT_INITIALIZED
Unknown Id	SUSI_STATUS_UNSUPPORTED
Bus Busy SDA/SDC low	SUSI_STATUS_BUSY_COLLISION
Arbitration Error/Collision Error	
On Write 1 write cycle	SUSI_STATUS_BUSY_COLLISION
SDA Remains low	
Time-out due to clock stretching	SUSI_STATUS_TIMEOUT
Address Non-ACK	SUSI_STATUS_NOT_FOUND
Success	SUSI_STATUS_SUCCESS

### 3.5.9 SusiSMBReadBlock

```
uint32_t SUSI_API SusiSMBReadBlock(uint32_t Id, uint8_t Addr, uint8_t Cmd,
uint8_t *pBuffer, uint32_t *pLength)
```

**Description:**

Read multi-data from the target slave device in the SMBus.

**Parameters:****Id**

Selects target device. See **Table 16**.

**Addr**

Specifies the 8-bit device address, ranging from 0x00 to 0xFF. Whether to give a 1 (read) or 0 (write) to the LSB of slave address could be ignored.

**Cmd**

Specifies the offset or command of the device register to read data from.

**pBuffer**

Pointer to a byte array in which the function reads the block data.

**pLength**

Pointer to a byte in which specifies the number of bytes to be read and also return succeed bytes.

**Return Status Code:**

Condition	Return Value
Library uninitialized	SUSI_STATUS_NOT_INITIALIZED
pBuffer==NULL	SUSI_STATUS_INVALID_PARAMETER
Unknown Id	SUSI_STATUS_UNSUPPORTED
Bus Busy SDA/SDC low	SUSI_STATUS_BUSY_COLLISION
Arbitration Error/Collision Error	
On Write 1 write cycle	SUSI_STATUS_BUSY_COLLISION
SDA Remains low	
Time-out due to clock stretching	SUSI_STATUS_TIMEOUT
Address Non-ACK	SUSI_STATUS_NOT_FOUND
Write Non-ACK	SUSI_STATUS_WRITE_ERROR
Success	SUSI_STATUS_SUCCESS

**3.5.10 SusiSMBWriteBlock**

```
uint32_t SUSI_API SusiSMBWriteBlock(uint32_t Id, uint8_t Addr, uint8_t Cmd,
                                     uint8_t *pBuffer, uint32_t Length)
```

**Description:**

Write multi-data from the target slave device in the SMBus.

**Parameters:****Id**

Selects target device. See **Table 16**.

**Addr**

Specifies the 8-bit device address, ranging from 0x00 to 0xFF. Whether to give a 1 (read) or 0 (write) to the LSB of slave address could be ignored.

**Cmd**

Specifies the offset or command of the device register to write data to.

**pBuffer**

Pointer to a byte array in which the function writes the block data.

**Length**

Specifies the number of bytes to be write.

**Return Status Code:**

Condition	Return Value
-----------	--------------

Library uninitialized	SUSI_STATUS_NOT_INITIALIZED
pBuffer==NULL	SUSI_STATUS_INVALID_PARAMETER
Unknown Id	SUSI_STATUS_UNSUPPORTED
Bus Busy SDA/SDC low	SUSI_STATUS_BUSY_COLLISION
Arbitration Error/Collision Error	
On Write 1 write cycle	SUSI_STATUS_BUSY_COLLISION
SDA Remains low	
Time-out due to clock stretching	SUSI_STATUS_TIMEOUT
Address Non-ACK	SUSI_STATUS_NOT_FOUND
Write Non-ACK	SUSI_STATUS_WRITE_ERROR
Success	SUSI_STATUS_SUCCESS

### 3.5.11 SusiSMBI2CReadBlock

```
uint32_t SUSI_API SusiSMBI2CReadBlock(uint32_t Id, uint8_t Addr, uint8_t Cmd,
uint8_t *pBuffer, uint32_t *pLength)
```

#### Description:

Read multi-data using I<sup>2</sup>C block protocol from the target slave device in the SMBus.

#### Parameters:

##### Id

Selects target device. See **Table 16**.

##### Addr

Specifies the 8-bit device address, ranging from 0x00 to 0xFF. Whether to give a 1 (read) or 0 (write) to the LSB of slave address could be ignored.

##### Cmd

Specifies the offset or command of the device register to read data from.

##### pBuffer

Pointer to a byte array in which the function reads the block data.

##### pLength

Pointer to a byte in which specifies the number of bytes to be read and also return succeed bytes.

#### Return Status Code:

Condition	Return Value
Library uninitialized	SUSI_STATUS_NOT_INITIALIZED
pBuffer==NULL	SUSI_STATUS_INVALID_PARAMETER

Unknown Id	SUSI_STATUS_UNSUPPORTED
Device unsupported	SUSI_STATUS_UNSUPPORTED
Bus Busy SDA/SDC low	SUSI_STATUS_BUSY_COLLISION
Arbitration Error/Collision Error	
On Write 1 write cycle	SUSI_STATUS_BUSY_COLLISION
SDA Remains low	
Time-out due to clock stretching	SUSI_STATUS_TIMEOUT
Address Non-ACK	SUSI_STATUS_NOT_FOUND
Write Non-ACK	SUSI_STATUS_WRITE_ERROR
Success	SUSI_STATUS_SUCCESS

### 3.5.12 SusiSMBI2CWriteBlock

```
uint32_t SUSI_API SusiSMBI2CWriteBlock(uint32_t Id, uint8_t Addr, uint8_t Cmd,
                                         uint8_t *pBuffer, uint32_t Length)
```

#### Description:

Write multi-data using I<sup>2</sup>C block protocol from the target slave device in the SMBus.

#### Parameters:

##### Id

Selects target device. See **Table 16**.

##### Addr

Specifies the 8-bit device address, ranging from 0x00 to 0xFF. Whether to give a 1 (read) or 0 (write) to the LSB of slave address could be ignored.

##### Cmd

Specifies the offset or command of the device register to write data to.

##### pBuffer

Pointer to a byte array in which the function writes the block data.

##### Length

Specifies the number of bytes to be write.

#### Return Status Code:

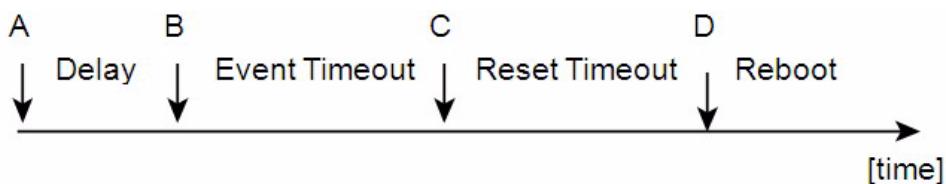

Condition	Return Value
Library uninitialized	SUSI_STATUS_NOT_INITIALIZED
pBuffer==NULL	SUSI_STATUS_INVALID_PARAMETER
Unknown Id	SUSI_STATUS_UNSUPPORTED
Device unsupported	SUSI_STATUS_UNSUPPORTED

Bus Busy SDA/SDC low	SUSI_STATUS_BUSY_COLLISION
Arbitration Error/Collision Error	
On Write 1 write cycle	SUSI_STATUS_BUSY_COLLISION
SDA Remains low	
Time-out due to clock stretching	SUSI_STATUS_TIMEOUT
Address Non-ACK	SUSI_STATUS_NOT_FOUND
Write Non-ACK	SUSI_STATUS_WRITE_ERROR
Success	SUSI_STATUS_SUCCESS

## 3.6 Watchdog Functions

After the watchdog timer has started it must be triggered within the (Delay + Event Timeout) millisecond parameters as set in the start function. Following the initial trigger, every subsequent trigger must occur within the (Event Timeout) millisecond parameter. Should a trigger not be called within the relevant time limit a system reset will occur. The SUSI watchdog timer may support two stages. If the watchdog is not triggered within the event timeout, an NMI, IRQ, or hardware output will be generated. Then the reset timeout becomes active. If the watchdog timer is not triggered within the reset timeout a reset will be generated

### Initial timing:

### Timing after trigger:

### Where:

#### Stage A

Watchdog is started.

#### Stage B

Initial delay period is exhausted.

#### Stage C/F

Event is triggered, NMI, IRQ, or PIN is triggered to allow for possible software recovery.

#### Stage D/G

System is reset.

#### Stage E

- Watchdog is Triggered.
- Trigger / Stop must be called before Stage C/F to prevent event from being generated.
- Trigger / Stop must be called before Stage D/G to prevent the system from being reset.

**Table 17 Watchdog ID**

<b>Id</b>	<b>Description</b>
SUSI_ID_WATCHDOG_1	First watchdog timer
SUSI_ID_WATCHDOG_2	Second watchdog timer
SUSI_ID_WATCHDOG_3	Third watchdog timer

### 3.6.1 SusiWDogGetCaps

```
uint32_t SUSI_API SusiWDogGetCaps(uint32_t Id, uint32_t ItemId, uint32_t *pValue)
```

**Description:**

Gets watchdog capabilities.

**Parameters:****Id**

Selects target device. See **Table 17**.

**ItemId**

Selects target capability. See **Table 18**.

**pValue**

Pointer to a buffer that receives the target capability.

**Return Status Code:**

<b>Condition</b>	<b>Return Value</b>
Library uninitialized	SUSI_STATUS_NOT_INITIALIZED
pValue==NULL	SUSI_STATUS_INVALID_PARAMETER
Unknown Id or ItemId	SUSI_STATUS_UNSUPPORTED
Success	SUSI_STATUS_SUCCESS

**Table 18 Watchdog capabilities item Id**

<b>Item Id</b>	<b>Description</b>
SUSI_ID_WDT_DELAY_MAXIMUM	The maximum delay time value
SUSI_ID_WDT_DELAY_MINIMUM	The minimum delay time value
SUSI_ID_WDT_EVENT_MAXIMUM	The maximum event time value
SUSI_ID_WDT_EVENT_MINIMUM	The minimum event time value
SUSI_ID_WDT_RESET_MAXIMUM	The maximum reset time value
SUSI_ID_WDT_RESET_MINIMUM	The minimum reset time value
SUSI_ID_WDT_UNIT_MINIMUM	The minimum unit value
SUSI_ID_WDT_DELAY_TIME	Current delay time setting

SUSI_ID_WDT_EVENT_TIME	Current event time setting
SUSI_ID_WDT_RESET_TIME	Current reset time setting
SUSI_ID_WDT_EVENT_TYPE	Current event type ( <b>Table 19</b> )

### 3.6.2 SusiWDogStart

```
uint32_t SUSI_API SusiWDogStart(uint32_t Id, uint32_t DelayTime, uint32_t EventTime,
uint32_t ResetTime, uint32_t EventType)
```

#### Description:

Start the watchdog timer and set the parameters. To adjust the parameters, the watchdog must be stopped and then started again with the new values. If the hardware implementation of the watchdog timer does not allow a setting at the exact time selected, then SUSI API selects the next possible longer timing.

#### Parameters:

##### **Id**

Selects target device. See **Table 17**.

##### **DelayTime**

Initial delay for the watchdog timer in milliseconds.

##### **EventTime**

Watchdog timeout interval in milliseconds to trigger an event.

##### **ResetTime**

Watchdog timeout interval in milliseconds to trigger a reset.

##### **EventType**

To select one kind of event type. See **Table 19**.

#### Return Status Code:

Condition	Return Value
Library uninitialized	SUSI_STATUS_NOT_INITIALIZED
Unknown Id	SUSI_STATUS_UNSUPPORTED
Wrong time range	SUSI_STATUS_INVALID_PARAMETER
Success	SUSI_STATUS_SUCCESS

**Table 19** Watchdog timer event type

Event Type	Description
SUSI_WDT_EVENT_TYPE_NONE	No event
SUSI_WDT_EVENT_TYPE_IRQ	IRQ event

---

SUSI_WDT_EVENT_TYPE_PWRBTN	Power button event
----------------------------	--------------------

---

### 3.6.3 SusiWDogStop

```
uint32_t SUSI_API SusiWDogStop(uint32_t Id)
```

**Description:**

Stops the operation of the watchdog timer.

**Parameters:**

**Id**

Selects target device. See **Table 17**.

**Return Status Code:**

---

Condition	Return Value
Library uninitialized	SUSI_STATUS_NOT_INITIALIZED
Unknown Id	SUSI_STATUS_UNSUPPORTED
Success	SUSI_STATUS_SUCCESS

---

### 3.6.4 SusiWDogTrigger

```
uint32_t SUSI_API SusiWDogTrigger(uint32_t Id)
```

**Description:**

Trigger the watchdog timer.

**Parameters:**

**Id**

Selects target device. See **Table 17**.

**Return Status Code:**

---

Condition	Return Value
Library uninitialized	SUSI_STATUS_NOT_INITIALIZED
Unknown Id	SUSI_STATUS_UNSUPPORTED
Success	SUSI_STATUS_SUCCESS

---

### 3.6.5 SusiWDogSetCallBack

```
uint32_t SUSI_API SusiWDogSetCallBack(uint32_t Id,
```

```
SUSI_WDT_INT_CALLBACK pfnCallback, void *Context)
```

**Description:**

The call back function pointer can be transmit from the application when IRQ triggered.

**Parameters:**

**Id**

Selects target device. See **Table 17**.

**pfnCallback**

Call back function pointer, SUSI\_WDT\_INT\_CALLBACK is function pointer type, it can set NULL to clear. The type definition is shown below,  
*typedef void (\*SUSI\_WDT\_INT\_CALLBACK)(void\*);*

**Context**

Pointer to a user context structure for callback function.

**Return Status Code:**

Condition	Return Value
Library uninitialized	SUSI_STATUS_NOT_INITIALIZED
Unknown Id	SUSI_STATUS_UNSUPPORTED
Success	SUSI_STATUS_SUCCESS

## 3.7 GPIO Functions

Programmable GPIO allows developers to dynamically set the GPIO input or output status

**Table 20** GPIO ID

Id	Description
SUSI_ID_GPIO(X)	X is GPIO pin number, definition as below: <code>#define SUSI_ID_GPIO(x) (0x0000   x)</code> This ID control single pin only.
SUSI_ID_GPIO_BANK(Y)	Y is GPIO bank number, definition as below: <code>#define SUSI_ID_GPIO_BANK(Y) (0x10000   Y)</code> This ID control maximum 32 pins per bank.

### 3.7.1 SusiGPIOGetCaps

```
uint32_t SUSI_API SusiGPIOGetCaps(uint32_t Id, uint32_t ItemId, uint32_t *pValue)
```

**Description:**

Reads the capabilities of the current GPIO implementation from the selected GPIO interface.

**Parameters:**

**Id**

Selects target device. See **Table 20**.

**ItemId**

Selects target capability. See **Table 21**.

**pValue**

Pointer to a buffer that receives the target capability.

**Return Status Code:**

Condition	Return Value
Library uninitialized	SUSI_STATUS_NOT_INITIALIZED
pValue==NULL	SUSI_STATUS_INVALID_PARAMETER
Unknown Id	SUSI_STATUS_UNSUPPORTED
Success	SUSI_STATUS_SUCCESS

**Table 21** GPIO capabilities item Id

Item Id	Description
SUSI_ID_GPIO_INPUT_SUPPORT	Get GPIO input support state

### 3.7.2 SusiGPIOGetDirection

```
uint32_t SUSI_API SusiGPIOGetDirection(uint32_t Id, uint32_t Bitmask,
uint32_t *pDirection)
```

**Description:**

Reads the capabilities of the current GPIO implementation from the selected GPIO interface.

**Parameters:**

**Id**

Selects target device. See **Table 20**.

**Bitmask**

Value for a bit mask. Only selected bits are changed, unselected bits remain unchanged.

This parameter will be ignored when single pin mode..

**pDirection**

Pointer to a buffer that receives the direction of the selected GPIO ports.

**Return Status Code:**

Condition	Return Value
Library uninitialized	SUSI_STATUS_NOT_INITIALIZED
pDirection==NULL	SUSI_STATUS_INVALID_PARAMETER
Bitmask==0 when bank mode	SUSI_STATUS_INVALID_PARAMETER
Unknown Id	SUSI_STATUS_UNSUPPORTED
Success	SUSI_STATUS_SUCCESS

### 3.7.3 SusiGPIOSetDirection

```
uint32_t SUSI_API SusiGPIOSetDirection(uint32_t Id, uint32_t Bitmask, uint32_t Direction)
```

**Description:**

Sets the configuration for the selected GPIO ports.

**Parameters:**

**Id**

Selects target device. See **Table 20**.

**Bitmask**

Value for a bit mask. Only selected bits are changed, unselected bits remain unchanged.

This parameter will be ignored when single pin mode.

#### Direction

Sets the direction of the selected GPIO ports.

#### Return Status Code:

Condition	Return Value
Library uninitialized	SUSI_STATUS_NOT_INITIALIZED
Bitmask==0 when bank mode	SUSI_STATUS_INVALID_PARAMETER
Unknown Id	SUSI_STATUS_UNSUPPORTED
Success	SUSI_STATUS_SUCCESS

### 3.7.4 SusiGPIOGetLevel

```
uint32_t SUSI_API SusiGPIOGetLevel(uint32_t Id, uint32_t Bitmask, uint32_t *pLevel)
```

#### Description:

Read level the from GPIO ports.

#### Parameters:

##### Id

Selects target device. See **Table 20**.

##### Bitmask

Value for a bit mask. Only selected bits are changed, unselected bits remain unchanged.

This parameter will be ignored when single pin mode.

##### pLevel

Pointer to a buffer that receives the GPIO level.

#### Return Status Code:

Condition	Return Value
Library uninitialized	SUSI_STATUS_NOT_INITIALIZED
pLevel==NULL	SUSI_STATUS_INVALID_PARAMETER
Bitmask==0 when bank mode	SUSI_STATUS_INVALID_PARAMETER
Unknown Id	SUSI_STATUS_UNSUPPORTED
Success	SUSI_STATUS_SUCCESS

### 3.7.5 SusiGPIOSetLevel

```
uint32_t SUSI_API SusiGPIOSetLevel(uint32_t Id, uint32_t Bitmask, uint32_t Level)
```

**Description:**

Write level to GPIO ports. Depending on the hardware implementation writing multiple GPIO ports with the bit mask option does not guarantee a time synchronous change of the output levels.

**Parameters:****Id**

Selects target device. See **Table 20**.

**Bitmask**

Value for a bit mask. Only selected bits are changed, unselected bits remain unchanged.

This parameter will be ignored when single pin mode.

**Level**

Input level of the selected GPIO port.

**Return Status Code:**

Condition	Return Value
Library uninitialized	SUSI_STATUS_NOT_INITIALIZED
Bitmask==0 when bank mode	SUSI_STATUS_INVALID_PARAMETER
Unknown Id	SUSI_STATUS_UNSUPPORTED
Success	SUSI_STATUS_SUCCESS

## 3.8 Smart Fan Functions

The Smart Fan function call is used to set fan speed configuration. You can use this function to easily control the fan speed. It takes a pointer to an instance of structure *SusiFanControl*, which is defined as follows:

```
#define SUSI_FAN_AUTO_CTRL_OPMODE_PWM 0
#define SUSI_FAN_AUTO_CTRL_OPMODE_RPM 1

typedef struct _AutoFan {
    uint32_t TmlSource;      // Thermal source
    uint32_t OpMode;
    uint32_t LowStopLimit;  // Temperature (0.1 Kelvins)
    uint32_t LowLimit;      // Temperature (0.1 Kelvins)
    uint32_t HighLimit;     // Temperature (0.1 Kelvins)
    uint32_t MinPWM;        // Enable when OpMode == FAN_AUTO_CTRL_OPMODE_PWM
    uint32_t MaxPWM;        // Enable when OpMode == FAN_AUTO_CTRL_OPMODE_PWM
    uint32_t MinRPM;         // Enable when OpMode == FAN_AUTO_CTRL_OPMODE_RPM
    uint32_t MaxRPM;         // Enable when OpMode == FAN_AUTO_CTRL_OPMODE_RPM
} AutoFan, *PAutoFan;

// Mode
#define SUSI_FAN_CTRL_MODE_OFF 0
#define SUSI_FAN_CTRL_MODE_FULL 1
#define SUSI_FAN_CTRL_MODE_MANUAL 2
#define SUSI_FAN_CTRL_MODE_AUTO 3

typedef struct _SusiFanControl {
    uint32_t Size;
    uint32_t Mode;
    uint32_t PWM;           // Manual mode only (0 - 100%)
    AutoFan AutoControl;   // Auto mode only
} SusiFanControl, *PSusiFanControl;
```

If Mode member of *SusiFanControl* is not Auto, *AutoControl* member will be ignored. In auto mode, parameter “TmlSource” is use *SUSI\_ID\_HWM\_TEMP\_XXX* (**Table 3**) to select which thermal type to reference. If TmlSource does not match any temperature ID it means it is unknown or unsupported.

### 3.8.1 SusiFanControlGetCaps

```
uint32_t SUSI_API SusiFanControlGetCaps(uint32_t Id, uint32_t ItemId, uint32_t *pValue)
```

#### Description:

Gets fan control capabilities.

#### Parameters:

##### Id

Smart fan ID is same as Fan Speed Value ID. See **Table 4**.

##### ItemId

Selects target capability. See **Table 22**. This parameter can also input temperature ID (**Table 3**) to get is it supports in *SusiFanControl* function.

##### pValue

Pointer to a buffer that receives the target capability.

#### Return Status Code:

Condition	Return Value
Library uninitialized	SUSI_STATUS_NOT_INITIALIZED
pValue==NULL	SUSI_STATUS_INVALID_PARAMETER
Unknown Id or ItemId	SUSI_STATUS_UNSUPPORTED
Success	SUSI_STATUS_SUCCESS

**Table 22** Fan control capabilities item Id

Item Id	Description
SUSI_ID_FC_CONTROL_SUPPORT_FLAGS	Control support flags (See <b>Table 23</b> )
SUSI_ID_FC_AUTO_SUPPORT_FLAGS	Auto support flags (See <b>Table 24</b> )

**Table 23** Control Support Flags

Flag Name	Description	Value
SUSI_FC_FLAG_SUPPORT_OFF_MODE	Support off mode	0x01
SUSI_FC_FLAG_SUPPORT_FULL_MODE	Support full mode	0x02
SUSI_FC_FLAG_SUPPORT_MANUAL_MODE	Support manual mode	0x04
SUSI_FC_FLAG_SUPPORT_AUTO_MODE	Support auto mode More detail to get <i>Auto Support Flags</i>	0x08

**Table 24** Auto Support Flags

Flag Name	Description	Value
-----------	-------------	-------

SUSI_FC_FLAG_SUPPORT_AUTO_LOW_STOP	Auto mode support Low Stop	0x01
SUSI_FC_FLAG_SUPPORT_AUTO_LOW_LIMIT	Auto mode support Low Limit	0x02
SUSI_FC_FLAG_SUPPORT_AUTO_HIGH_LIMIT	Auto mode support High Limit	0x04
SUSI_FC_FLAG_SUPPORT_AUTO_PWM	Auto mode support PWM operation	0x0100
SUSI_FC_FLAG_SUPPORT_AUTO_RPM	Auto mode support RPM operation	0x0200

### 3.8.2 SusiFanControlGetConfig

```
uint32_t SUSI_API SusiFanControlGetConfig(uint32_t Id, SusiFanControl *pConfig)
```

#### Description:

Get information about smart fan function mode and configuration.

#### Parameters:

##### Id

Smart fan ID is same as Fan Speed Value ID. See **Table 4**.

##### pConfig

Pointer to the smart fan function configuration.

#### Return Status Code:

Condition	Return Value
Library uninitialized	SUSI_STATUS_NOT_INITIALIZED
pConfig==NULL	SUSI_STATUS_INVALID_PARAMETER
Unknown Id	SUSI_STATUS_UNSUPPORTED
Device does not support smart mode	SUSI_STATUS_UNSUPPORTED
Success	SUSI_STATUS_SUCCESS

### 3.8.3 SusiFanControlSetConfig

```
uint32_t SUSI_API SusiFanControlSetConfig(uint32_t Id, SusiFanControl *pConfig)
```

#### Description:

Sets smart fan function mode and configuration.

#### Parameters:

##### Id

Smart fan ID is same as Fan Speed Value ID. See **Table 4**.

##### pConfig

Pointer to the smart fan function configuration.

**Return Status Code:**

Condition	Return Value
Library uninitialized	SUSI_STATUS_NOT_INITIALIZED
pConfig==NULL	SUSI_STATUS_INVALID_PARAMETER
Wrong configuration	SUSI_STATUS_INVALID_PARAMETER
Unknown Id	SUSI_STATUS_UNSUPPORTED
Success	SUSI_STATUS_SUCCESS

## 3.9 Storage Functions

Access storage information and read / write data to the selected user data area. Developers can use this area to store their own data.

**Table 25 Storage ID**

<b>Id</b>	<b>Description</b>
SUSI_ID_STORAGE_STD	Standard storage device
SUSI_ID_STORAGE_OEM0~1	Other storage devices

### 3.9.1 SusiStorageGetCaps

```
uint32_t SUSI_API SusiStorageGetCaps(uint32_t Id, uint32_t ItemId, uint32_t *pValue)
```

**Description:**

Reads the capabilities of the current GPIO implementation from the selected GPIO interface.

**Parameters:**

**Id**

Selects target device. See **Table 25**.

**ItemId**

Selects target capability. See **Table 26**.

**pValue**

Pointer to a buffer that receives the target capability.

**Return Status Code:**

<b>Condition</b>	<b>Return Value</b>
Library uninitialized	SUSI_STATUS_NOT_INITIALIZED
pValue==NULL	SUSI_STATUS_INVALID_PARAMETER
Unknown Id	SUSI_STATUS_UNSUPPORTED
Device not support	SUSI_STATUS_UNSUPPORTED
Success	SUSI_STATUS_SUCCESS

**Table 26 Storage capabilities item Id**

<b>Item Id</b>	<b>Description</b>
SUSI_ID_STORAGE_TOTAL_SIZE	Get storage total size in bytes
SUSI_ID_STORAGE_BLOCK_SIZE	Get storage block size in bytes
SUSI_ID_STORAGE_LOCK_STATUS	Get storage lock status. See <b>Table 27</b> .

SUSI_ID_STORAGE_PSW_MAX_LEN	Get maximum length in byte of storage lock key
-----------------------------	--

**Table 27 Storage Lock Status**

Lock Status	Description
SUSI_STORAGE_STATUS_LOCK	Storage is lock
SUSI_STORAGE_STATUS_UNLOCK	Storage is unlock

### 3.9.2 SusiStorageAreaRead

```
uint32_t SUSI_API SusiStorageAreaRead(uint32_t Id, uint32_t Offset, uint8_t *pBuffer,
uint32_t BufLen)
```

**Description:**

Reads data from the selected user data area.

**Parameters:**

**Id**

Selects target device. See **Table 25**.

**Offset**

Storage area start address offset in bytes.

**pBuffer**

Size in bytes of the buffer pointed to by the pBuffer parameter.

**BufLen**

Size in bytes of the information read to the buffer pointed to by the pBuffer parameter.

**Return Status Code:**

Condition	Return Value
Library uninitialized	SUSI_STATUS_NOT_INITIALIZED
pBuffer==NULL    BufLen==0	SUSI_STATUS_INVALID_PARAMETER
Offset+BufLen>TotalSize	SUSI_STATUS_INVALID_BLOCK_LENGTH
Unknown Id	SUSI_STATUS_UNSUPPORTED
Read error	SUSI_STATUS_READ_ERROR
Success	SUSI_STATUS_SUCCESS

### 3.9.3 SusiStorageAreaWrite

```
uint32_t SUSI_API SusiStorageAreaWrite(uint32_t Id, uint32_t Offset, uint8_t *pBuffer,
uint32_t BufLen)
```

**Description:**

Writes data to the selected user data area.

**Parameters:****Id**

Selects target device. See **Table 25**.

**Offset**

Storage area start address offset in bytes.

**pBuffer**

Size in bytes of the buffer pointed to by the pBuffer parameter.

**BufLen**

Size in bytes of the information read to the buffer pointed to by the pBuffer parameter.

**Return Status Code:**

Condition	Return Value
Library uninitialized	SUSI_STATUS_NOT_INITIALIZED
pBuffer==NULL    BufLen==0	SUSI_STATUS_INVALID_PARAMETER
Offset+BufLen>TotalSize	SUSI_STATUS_INVALID_BLOCK_LENGTH
Unknown Id	SUSI_STATUS_UNSUPPORTED
Write error	SUSI_STATUS_WRITE_ERROR
Success	SUSI_STATUS_SUCCESS

### 3.9.4 SusiStorageAreaSetLock

```
uint32_t SUSI_API SusiStorageAreaSetLock(uint32_t Id, uint8_t *pBuffer, uint32_t BufLen)
```

**Description:**

Lock a storage area for write protection.

**Parameters:****Id**

Selects target device. See **Table 25**.

**pBuffer**

Locks key buffer.

**BufLen**

Number of key buffers

**Return Status Code:**

Condition	Return Value
Library uninitialized	SUSI_STATUS_NOT_INITIALIZED
pBuffer==NULL    BufLen==0	SUSI_STATUS_INVALID_PARAMETER
Lock error	SUSI_STATUS_WRITE_ERROR
Unknown Id	SUSI_STATUS_UNSUPPORTED
Device not support	SUSI_STATUS_UNSUPPORTED
Success	SUSI_STATUS_SUCCESS

### 3.9.5 SusiStorageAreaSetUnlock

```
uint32_t SUSI_API SusiStorageAreaSetUnlock(uint32_t Id, uint8_t *pBuffer,
                                         uint32_t BufLen)
```

#### Description:

Unlock a storage area for write protection.

#### Parameters:

##### Id

Selects target device. See **Table 25**.

##### pBuffer

Unlock key buffer.

##### BufLen

Number of key buffers

#### Return Status Code:

Condition	Return Value
Library uninitialized	SUSI_STATUS_NOT_INITIALIZED
pBuffer==NULL    BufLen==0	SUSI_STATUS_INVALID_PARAMETER
Unlock error	SUSI_STATUS_WRITE_ERROR
Unknown Id	SUSI_STATUS_UNSUPPORTED
Device not support	SUSI_STATUS_UNSUPPORTED
Success	SUSI_STATUS_SUCCESS

## 3.10 Thermal Protection Functions

The Thermal Protection function call is used to set hardware base thermal monitoring and notification.

It takes a pointer to an instance of structure *SusiThermalProtect*, which is defined as follows:

```
typedef struct _SusiThermalProtect{  
    uint32_t SourceId;  
    uint32_t EventType;  
    uint32_t SendEventTemperature;  
    uint32_t ClearEventTemperature;  
} SusiThermalProtect, *PSusiThermalProtect;
```

**Where:**

**SourceId**

Setting thermal source ID here. See **Table 3**.

**EventType**

This byte can set up a thermal protect event, see **Table 28**. NOT every platform supports all event type.

**SendEventTemperature**

Unit is 0.1 Kelvins. When thermal source goes over this value, SUSI will send event according Event Type.

**ClearEventTemperature**

Unit is 0.1 Kelvins. When thermal source goes below this value and Event is sent, SUSI will clear event according Event Type

**Table 28 Thermal Protection Event Type**

Event Type Name	Description	Value
SUSI_THERMAL_EVENT_SHUTDOWN	Shutdown event	0x00
SUSI_THERMAL_EVENT_THROTTLE	Throttle event	0x01
SUSI_THERMAL_EVENT_POWEROFF	Power off event	0x03
SUSI_THERMAL_EVENT_NONE	No event	0xFF

**Table 29 Thermal Protection ID**

Id	Description
SUSI_ID_THERMAL_PROTECT_1	Thermal protection zone 1
SUSI_ID_THERMAL_PROTECT_2	Thermal protection zone 2
SUSI_ID_THERMAL_PROTECT_3	Thermal protection zone 3
SUSI_ID_THERMAL_PROTECT_4	Thermal protection zone 4

### 3.10.1 SusiThermalProtectionGetCaps

```
uint32_t SUSI_API SusiThermalProtectionGetCaps(uint32_t Id, uint32_t ItemId,  
uint32_t *pValue)
```

#### Description:

Gets Thermal Protection capabilities.

#### Parameters:

##### Id

Selects target device. See **Table 29**.

##### ItemId

Selects target capability. See **Table 30**. This parameter can also input temperature ID (**Table 3**) to get is it supports in *SusiThermalProtection* function.

##### pValue

Pointer to a buffer that receives the target capability.

#### Return Status Code:

Condition	Return Value
Library uninitialized	SUSI_STATUS_NOT_INITIALIZED
pValue==NULL	SUSI_STATUS_INVALID_PARAMETER
Unknown Id or ItemId	SUSI_STATUS_UNSUPPORTED
Success	SUSI_STATUS_SUCCESS

**Table 30 Thermal Protection capabilities item Id**

Item Id	Description
SUSI_ID_TP_EVENT_SUPPORT_FLAGS	Event support flags (See <b>Table 31</b> )
SUSI_ID_TP_EVENT_TRIGGER_MAXIMUM	The maximum temperature to trigger event
SUSI_ID_TP_EVENT_TRIGGER_MINIMUM	The minimum temperature to trigger event
SUSI_ID_TP_EVENT_CLEAR_MAXIMUM	The maximum temperature to clear event
SUSI_ID_TP_EVENT_CLEAR_MINIMUM	The minimum temperature to clear event

**Table 31 Thermal Protection Support Flags**

Flag Name	Description	Value
SUSI_THERMAL_FLAG_SUPPORT_SHUTDOWN	Supports shutdown event	0x01
SUSI_THERMAL_FLAG_SUPPORT_THROTTLE	Supports throttle event	0x02
SUSI_THERMAL_FLAG_SUPPORT_POWEROFF	Supports power off event	0x04

### 3.10.2 SusiThermalProtectionSetConfig

```
uint32_t SUSI_API SusiThermalProtectionSetConfig(uint32_t Id,  
SusiThermalProtect *pConfig)
```

#### Description:

Set Thermal Protection configuration.

#### Parameters:

##### Id

Selects target device. See **Table 29**.

##### pConfig

A data package for thermal protection.

#### Return Status Code:

Condition	Return Value
Library uninitialized	SUSI_STATUS_NOT_INITIALIZED
pConfig==NULL	SUSI_STATUS_INVALID_PARAMETER
Config invalid	SUSI_STATUS_INVALID_PARAMETER
Source Id or event type not supported	SUSI_STATUS_UNSUPPORTED
Unknown Id	SUSI_STATUS_UNSUPPORTED
Success	SUSI_STATUS_SUCCESS

### 3.10.3 SusiThermalProtectionGetConfig

```
uint32_t SUSI_API SusiThermalProtectionGetConfig(uint32_t Id,  
SusiThermalProtect *pConfig)
```

#### Description:

Get Thermal Protection configuration.

#### Parameters:

##### Id

Selects target device. See **Table 29**.

##### pConfig

A data package for thermal protection.

#### Return Status Code:

Condition	Return Value
Library uninitialized	SUSI_STATUS_NOT_INITIALIZED
pConfig==NULL	SUSI_STATUS_INVALID_PARAMETER
Unknown Id	SUSI_STATUS_UNSUPPORTED
Success	SUSI_STATUS_SUCCESS
